

ALUMINUM, ANODIZED

Anodized coating provides great protection against oxidation. In order to avoid stains on the surface, it is recommended to be cleaned after installation. Anodized surfaces are sensitive against scratches, attention should be paid during installation. It can be produced with matte, glossy and satin surface effect options and the following colors.

ALUMINUM, POWDER COATED

Products with this surface are coated with powder paint after pre-treatment against corrosion and then heat treated. Electrostatic powder coating process adds a protective layer to the profiles with its high coating thickness. Unlimited color options are available in the RAL catalog. Following colors are standard.

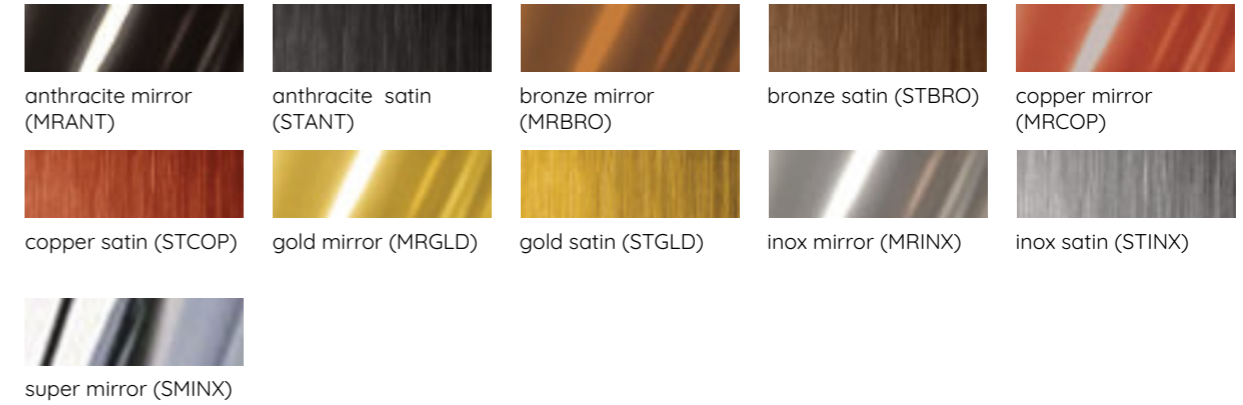

ALUMINUM, CHROME PLATED

Chrome plating enables products to gain mirror-level brightness and reflectivity. So it stands out with its compatibility with all places. For a long-term use, surfaces must be protected from scratches and abrasions. Hydrofluoric acid or chlorine bleach cleaners should not be used. Chrome plated surfaces are sensitive against scratching, attention should be paid during installation.

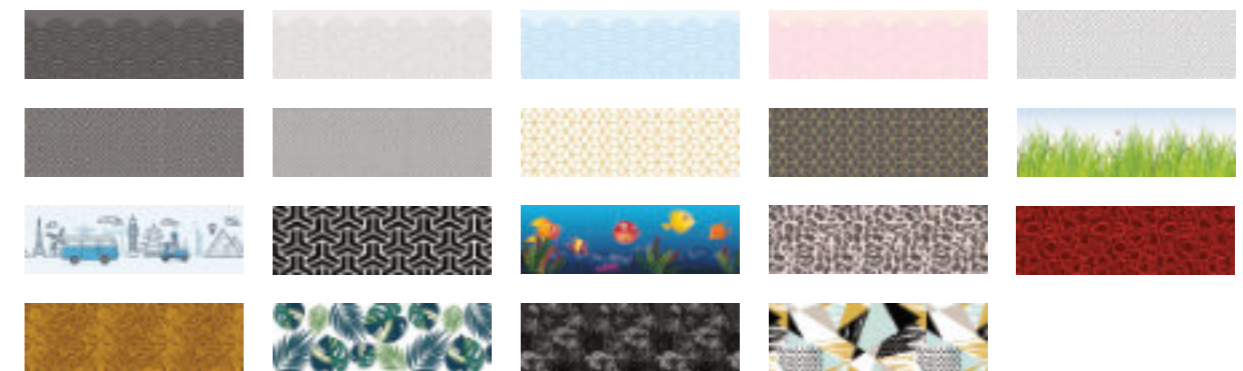

STAINLESS STEEL

The chromium oxide layer on the surface provides the abrasion resistance of stainless steel profiles. When the layer is damaged, it repairs itself in the presence of oxygen, it can be shaped and colored by chemical and mechanical processes. Stainless steel profiles are especially preferred outdoors.

WISH PATTERNS

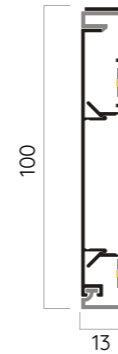

The high-resolution, special UV print coated on the profiles is not affected by sun and moisture for many years, preserving its vitality. In addition to standard available designs, personalized custom designs can also be applied.
